### PROJECTS

#### Pet Tracker

Technologies used: Arduino • C++ • Firebase • HTML • CSS • Bootstrap • REST API

- I created a GPS device from scratch using an Arduino Nano and other IOT components such as NEO-M8N and SIM800L Modules, programmed to send GPS coordinates to Firebase Realtime Database via REST API integration. Additionally, I created a dedicated download web page for easy access to our own developed mobile application.

#### SelfDevProg Website

Technologies used: Next.js • Typescript • Sanity.io • Tailwindcss

- Designed and developed a website focused on promoting self-development activities, featuring tools to support personal growth, goal setting, and productivity. Implemented interactive elements and user-friendly navigation to enhance user engagement.

#### ADirectory

Next.js • Typescript • Sanity.io • Tailwindcss

- A startup pitch website to showcase a business concept, highlight its key features, and attract potential investors or partners. Focused on clean UI/UX, and responsive design to ensure a professional online presence.

### PROFESSIONAL EXPERIENCE

#### Simplevia Technologies Inc.

January 2025 - May 2025, Remote

Role: Front-End Developer

- Collaborated with a team to create, debug, and implement a dynamic web page using the Vue.js framework, integrating it with a MySQL database on the back end. Contributed to both front-end functionality and troubleshooting efforts to ensure a smooth, data-driven user experience.
